

Questions to Green IT class

1. How to make sustainability related applications more user friendly, so that people will change their behaviour?
 - It is essential that these system are type of things that people like to use, in order to get the biggest effect.
2. In which areas of sustainability, there is biggest need for data analysing?
 - Data analysing is one of the main points of the Computing Research for Sustainability book, so this question would combine well both the topic of the course & the book.
3. How the universality of computer science can lead to sustainability?
 - Universality is key term of the book and this links it to sustainability.
4. Define term “leapfrogging” in a context of sustainability:
 - Term is important to understand, when discussing about development in ICT and also in cleantech sector.
