OF YOUR SHARE

Find out how to shrink your footprint.

2020 TARGET
This is where you need to be.
As set by the UK government.

YOUR CARBON BREAKDOWN

How your footprint is measured and tips on how you can make improvements to reach the targets.

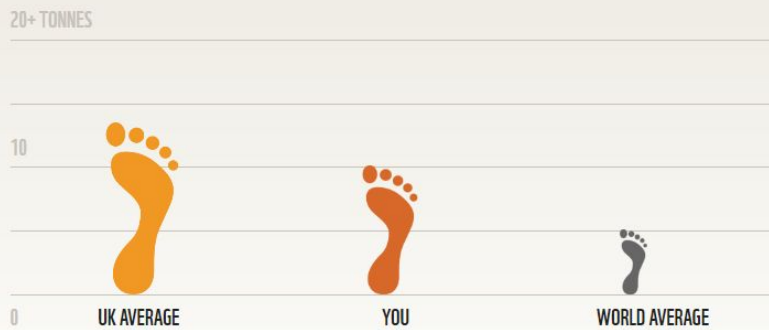

YOUR TOTAL ANNUAL CARBON EMISSIONS

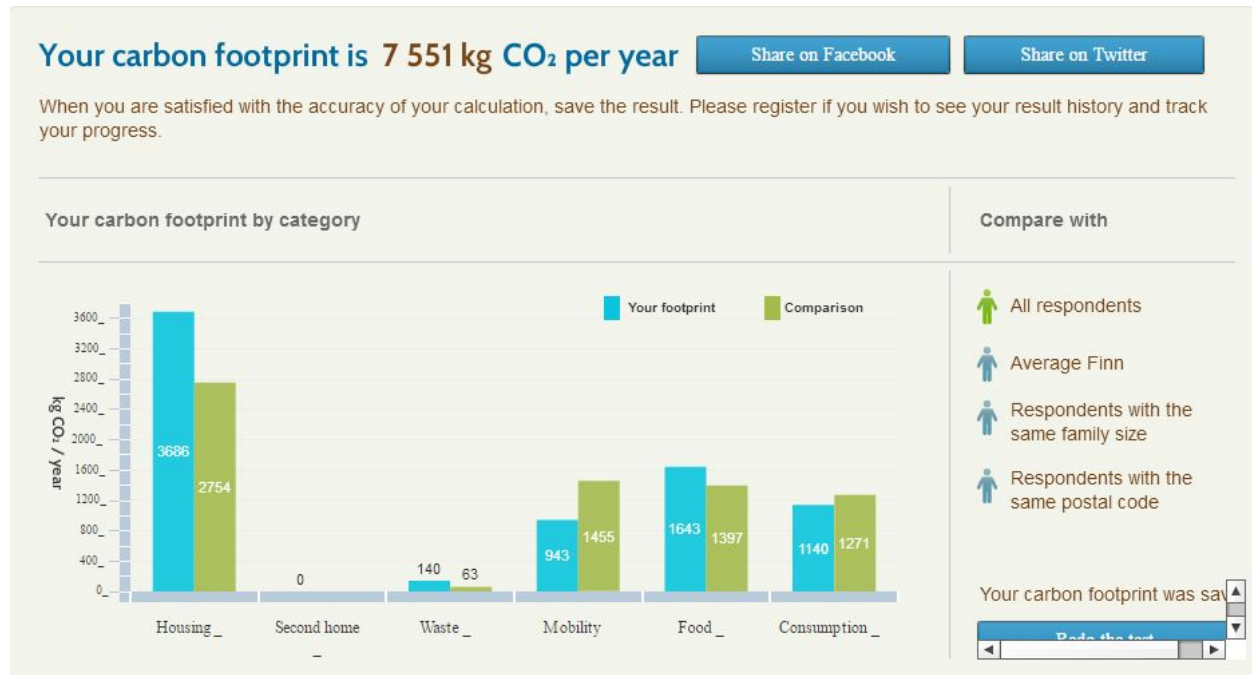

HOW YOU COMPARE

Your annual footprint (including the Government component) equates to the following:

Finnish Environmental Inst.

I used WWF UK Tool and Finnish Environmental Inst. Tool for analysing my carbon footprint. I think that these tools are quite interesting since they compare your end results with others and it brings challenge for the user to try to live more sustainable. However, the results are different significantly as in Finnish tool it shows only 7 555 kg, yet in WWF UK it is showing 10.1 Tons,

According to WWF UK tool I am 3% below the average and it means that I live in a sustainable way however in Finnish Environmental tool in some cases I'm over the average.

Since we do not have much information about the energy consumption of our flat, the results are not accurate. But I like the results in other parts such as food, waste and travel.
